TECHNICAL BULLETIN 11

Hydraulic Fittings

As we look to enhance our offering to the market, our manufacturing team in Italy are developing our hose and fitting range in line with technical innovations and market demands.

We are now producing slip nut BSP female fittings as standard. These replace our roll nut style fittings.

NEW 0058 FITTING

NEW 0158 FITTING

This will affect the range between 1/4" and 1/2" with the 0051, 0151 part numbers being replaced with 0058, 0158 representing the straight and 90 degree angles.

The new fittings will offer benefits, such as ease of fitment, increased strength and better tightening properties with increased nut length for improved spanner area.

The overall nut A/F dimensions are as with the 51 series and thrust wire fittings that they replace, meeting appropriate ISO standards (ISO 12151-6).

These new fittings are fully compatible and qualified with other Interpump Fluid Solutions products.
