## HOW TO ORDER

Code: 1700-12-12

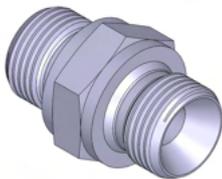

Description: BSP Niple - Junction 3/4"

Code: 1700-12-12NI

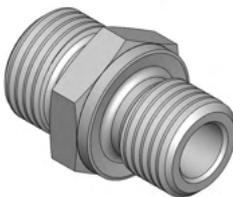

Description: BSP Niple - Junction 3/4"

Zinc-Nickel Surface Treated

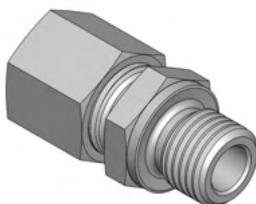

Code: X1700-12-12

Description: BSP Niple Junction 3/4" Stainless Steel (AISI 316L)

Codice: 7430-16SR-1NI

Description: DIN male stud coupling 16 S- G 1/2 (Form B ISO 1179-4) - BODY ONLY - (ZINC-NICKEL)

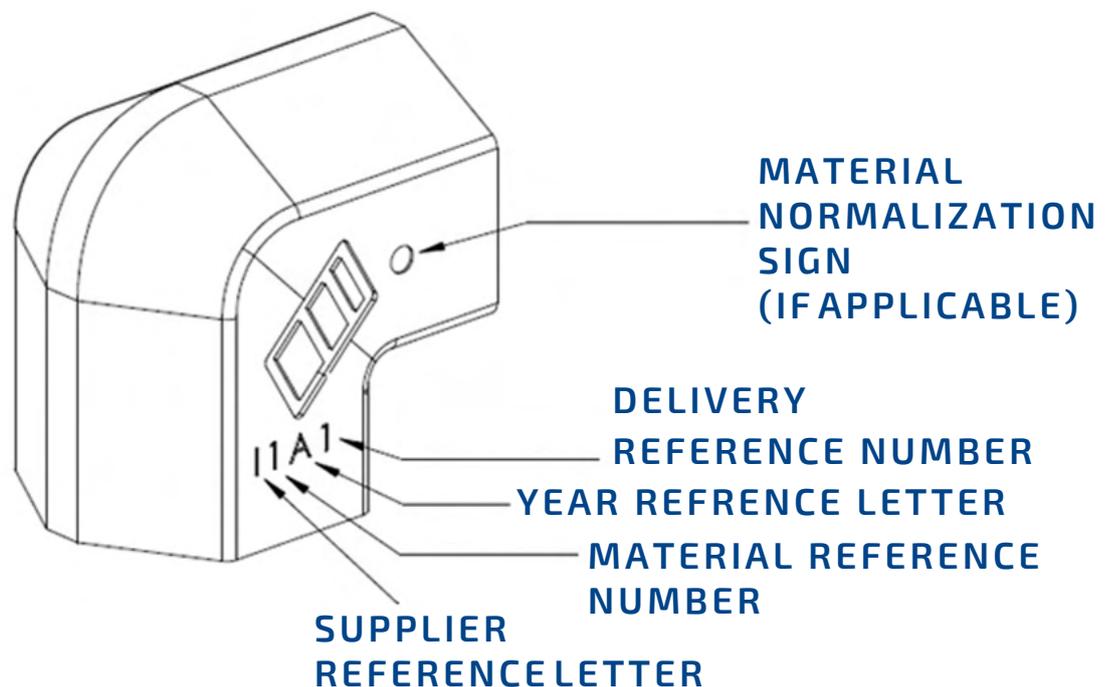

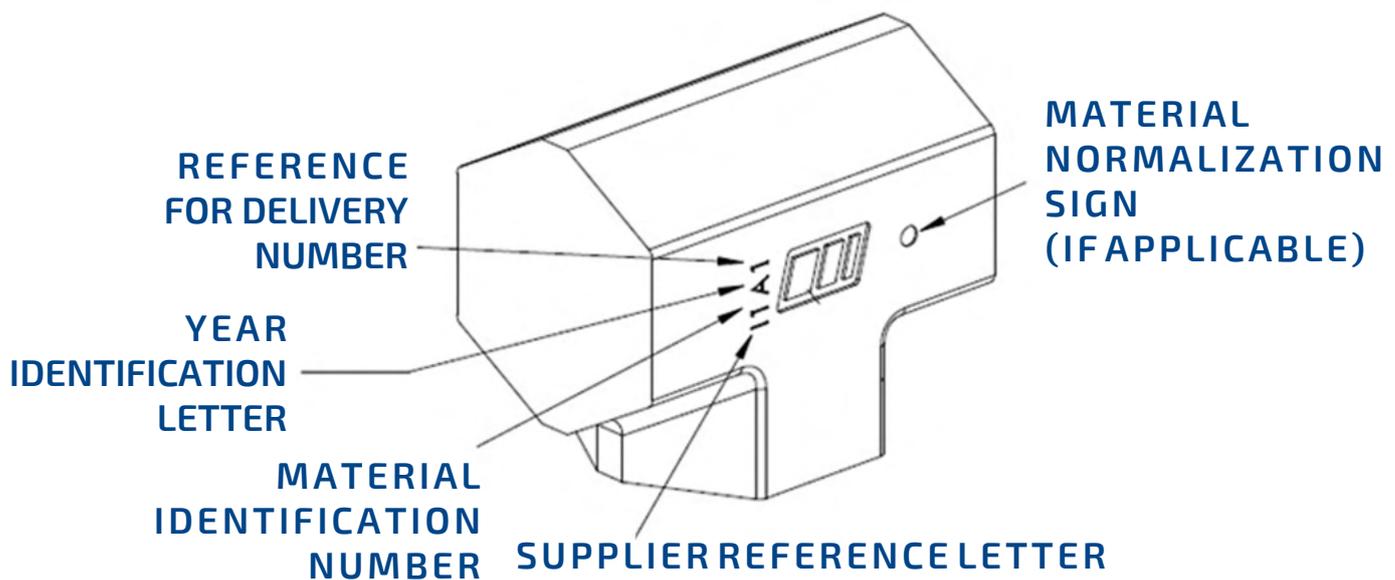

Codice: 7430-16SRNI

Description: DIN male stud coupling 16 S- G 1/2 (Form B ISO 1179-4) - (ZINC-NICKEL)

Note: with nut (cod. 7400) and cutting Ring (cod. 7410)

## TRACEABILITY

Product Traceability is guaranteed by a dedicated stamping process developed by I.M.M Hydraulics Spa in order to trace material, supplier and batch number. This is a value-added feature in line with the company total quality management approach.

## INTRODUCTION

Hydraulic Systems need adaptors installation to close and have an integrated and finished circuit.

Adaptors are used mainly to:

- Adjust the thread dimensions (by increasing or reducing them);
- Change the thread: connection type change to have an easier flexible hoses connection or rigid pipe installation;
- Adjust tubes end: tube-to-fittings connection, tube – to – tube connection.
- Plug-in the circuit.

Adaptors can have the following thread configuration: metric, BSPP, BSPT, SAE, UN/UNF, NPT/NPTF

<b>Thread</b>	<b>Reference Standard</b>
Metric	ISO 261, ANSI B1.13M
BSPP	BS 2779, ISO 228/1
BSPT	BS21, ISO 7/1
NPT	ANSI B1.21.1
NPTF	SAE J476, ANSI B1.20.3
NPSM	ANSI B1.20.1
UN/UNF	ANSI B1.1

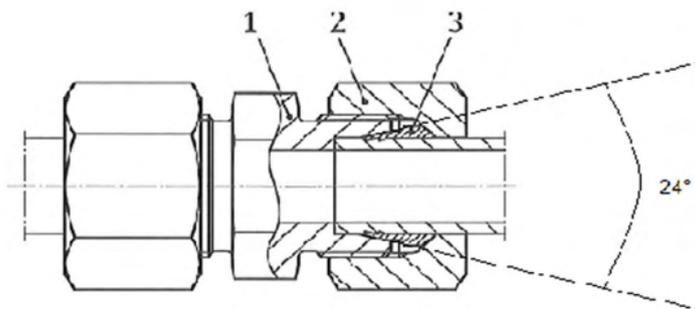

## Connection Type and Reference Standard

### METRIC ADAPTORS

Usually called as DIN, metric adaptors comply with DIN 2353, DIN 3861 e DIN 3859 - ISO 8434-1 reference std.

Leakage resistance guaranteed by sealing angled faces at 24°, con o senza o-ring (metal-to-metal sealing). Thread type is metric.

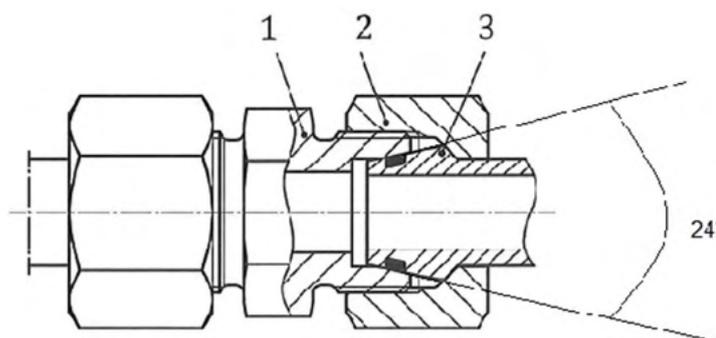

#### cross section typical 24° cone connector with cutting ring

#### KEY

- 1 - body
- 2 - nut
- 3 - cutting ring

#### cross section of typical 24° cone connector with O-Ring seal cone (DKO) end

#### KEY

- 1 - corpo
- 2 - dado
- 3 - terminale DKO (con o-ring)

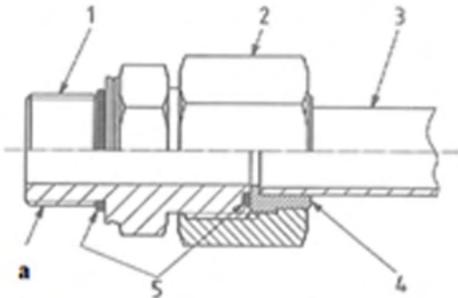

Metric adaptors are largely used by OEM in agriculture and industrial field. The related sealing system provides high pressure performance level, high leakage resistance, good high torque value resistance and the possibility to perform repetitive assembly and disassembly provided that O-ring is replaced.

## ORFS ADAPTERS

ORFS adaptors comply with ISO 8434-2 and SAE J1453. This connection type is designed to provide the best sealing at the higher pressure. Sealing is guaranteed by the male O-ring compression on the flat female surface.

The mechanical joint is assured by the UN/UNF thread.

### Cross section and components of typical O -Ring face seal connector body

#### KEY

- 1 - straight stud connector body
- 2 - tube nut
- 3 - tube
- 4 - braze-on sleeve
- 5 - o-ring

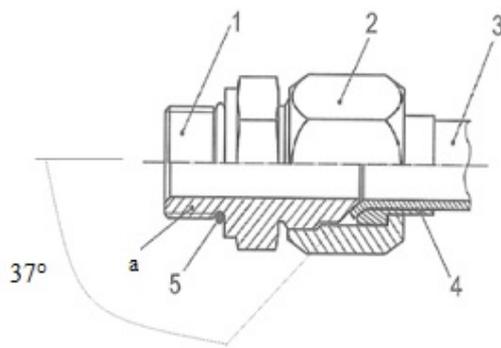

a - Stud end in accordance with ISO 6149-2

ORFS adaptors are mainly used in US and UE market and they are widely used by ground movement machines OEM. Sealing system assures excellent performances in high pressure and vibration condition, leakage resistance, good high torque value resistance and provides the possibility to perform repetitive assembly and disassembly if O-Ring replaced.

## JIC ADAPTERS

Usually called as JIC these adaptors comply with ISO 8434-2 and SAE J514. Sealing guaranteed by metal-to-metal joint with a flared angle of  $37^\circ$  without components deformation. Thread are straight UN/UNF type.

### cross section of typical $37^\circ$ flared connection

#### KEY

- 1 - straight stud connection body
- 2 - tube nut
- 3 - tube
- 4 - sleeve
- 5 - o-ring

a - Stud end in accordance with ISO 1179-3, ISO 6149, ISO 9974-2 o ISO 11926-3

JIC adaptors are mainly used in US market for industrial field. Sealing type assured good performance at high pressure condition.

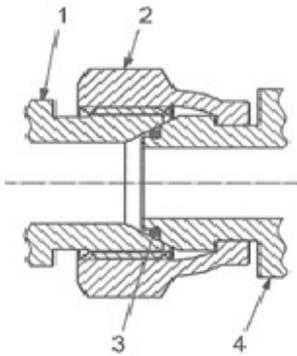

## BSP ADAPTERS

The related reference standards are BS5200 and ISO 8434-6. On BSPP connection the sealing is guaranteed by metal to metal surface contact with a surface angle of 60°.

On BSPT connection the sealing is guaranteed by the thread and for this reason it is necessary to add a sealing material.

La forma della filettatura ha un semiangolo dei fianchi di 55 gradi.

### Sezione di una tipica connessione 60° con O-Ring

#### KEY

- 1 - male
- 2 - nut
- 3 - o-ring
- 4 - female connector

BSP connection is widely used in Europe, Japan and Commonwealth area for industrial applications.

## NPT/NPTF ADAPTERS

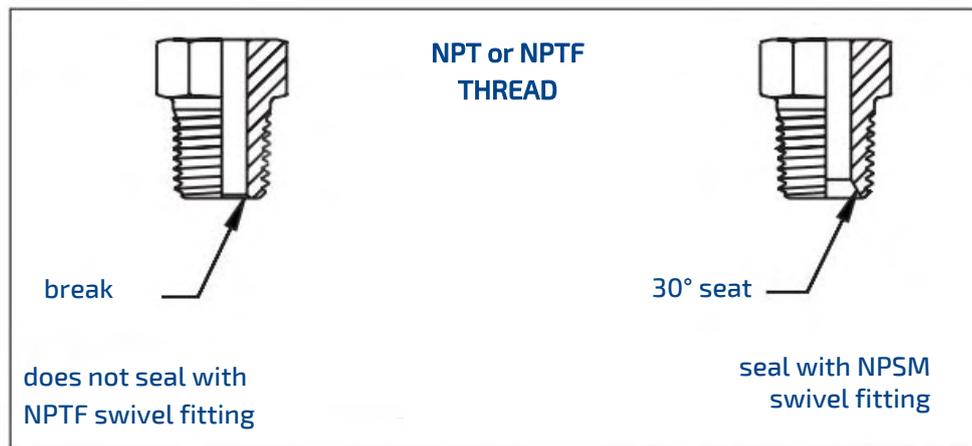

Adapters NPT/NPTF conform to ANSI B1.21.1 e SAE J476, ANSI B1.20.3. Sono caratterizzati da filettature coniche, con semiangolo dei fianchi di 60 gradi.

In the NPT / NPTF connection, the seal is carried out on the thread with the aid of appropriate sealing materials.

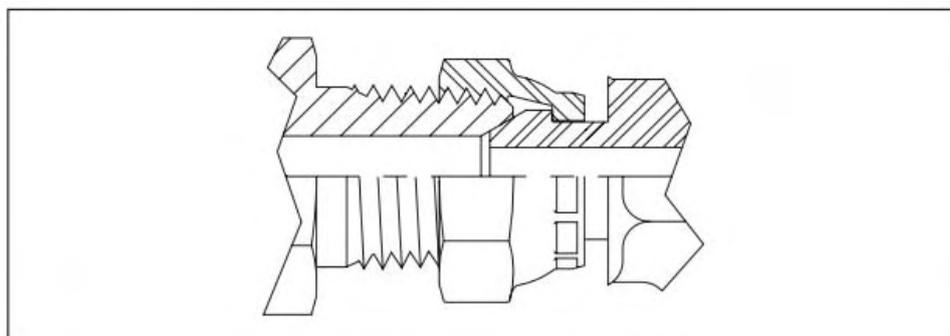

If a 30 ° half-angle is made on the nipple, the seal can be carried out in conjunction with a NPSM swivel female.

The NPT/NPTF connection is mostly used in the USA, where it is mainly used in the industrial sector for the transfer of fluids under pressure.

The sealing system guarantees good performance with medium-high pressures in static conditions, for dynamic applications, especially for sizes greater than 1" it is advisable to use other types of connections.

The illustration shows the 30 ° seat on the NPT / NPTF threads necessary for the NPSM swivel fitting to seal.

The illustration shows how the NPSM swivel adapters seal onto the corresponding groove in the male NPT thread.

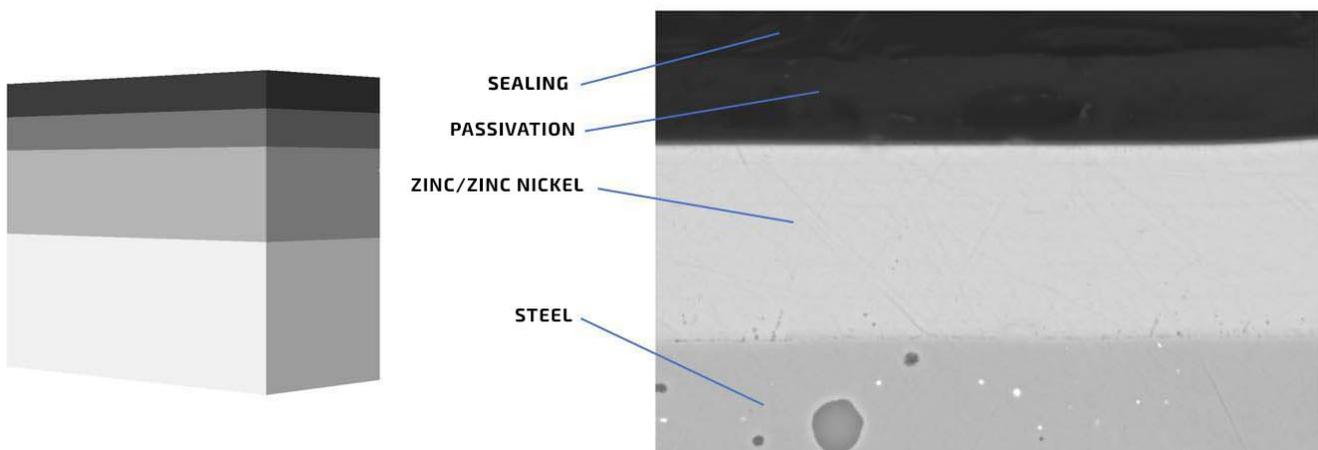

## SURFACE TREATMENTS

Interpump Fluid Solutions makes use of its own plants for the realization of surface treatments such as «standard» zinc and nickel zinc, ensuring the high quality and performance standards required by the market.

**Our systems ensure a low environmental impact by complying with the most stringent standards in terms of environment and safety.**

**The hexavalent chromium-free passivation ensures a low environmental impact. In addition to increasing the performance of the product, the sealing is designed to ensure low coefficient of friction values.**

The available solutions ensure high reliability in all work environments:

«Standard» zinc treatment in accordance with ISO 2081 Fe / Zn8 / C / T2 specification

The standard zinc treatment, with a minimum thickness of pure zinc of 8µm and white passivation, ensures a corrosion resistance higher than the market standard.

The appearance is matte metallic.

FINISHING	THICKNESS	MINIMUM RESISTANCE RED RUST
White zinc-plating without Cr VI No Seal	>8	>400 h

Zn-Ni treatment in accordance with the ISO 19598 specification Fe // ZnNi8 // An // T2

The zinc nickel treatment (Zn-Ni alloy coating (Ni 12% -16%, thickness 8-12 microns) has a gray-blue color with slight iridescence.

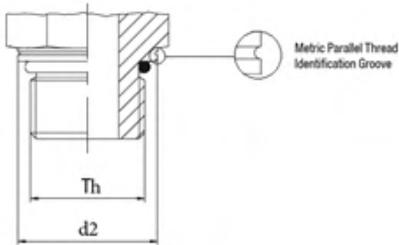

It is indicated when a high resistance to corrosion is required in severe exposure conditions.

Zinc nickel treatment is offered std for DIN 2353 - ISO 8434-1 adapters

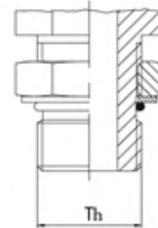

FINISHING	THICKNESS	MINIMUM RESISTANCE RED RUST
Transparent-blue (colorless), passivation based on trivalent chromium (chromium VI free)	>8	>720 h

## PORT AND STUD ENDS DIMENSION

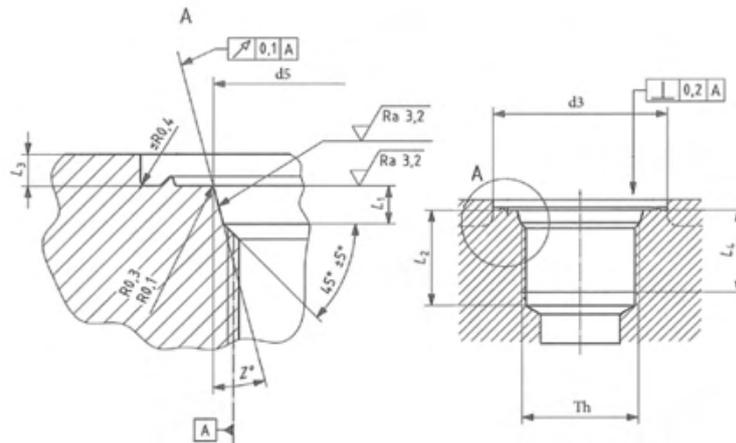

**Non- Adjustable**

**Metric Parallel Thread  
ISO 6149-2/-3**

**Adjustable**

**Metric Parallel Thread  
ISO 6149-2/-3**

**Sealing with thread short. Repetitive assembly is not recommended. Necessary sealing materials.**

## TUBE SIZE DIFINITION

In tube design and definition it is necessary to consider the following aspects:

- Internal Diameter definition;
- Wall thickness definition.

Here below a normogram and DIN 2413 / ISO 10763 pressure reference table are reported.

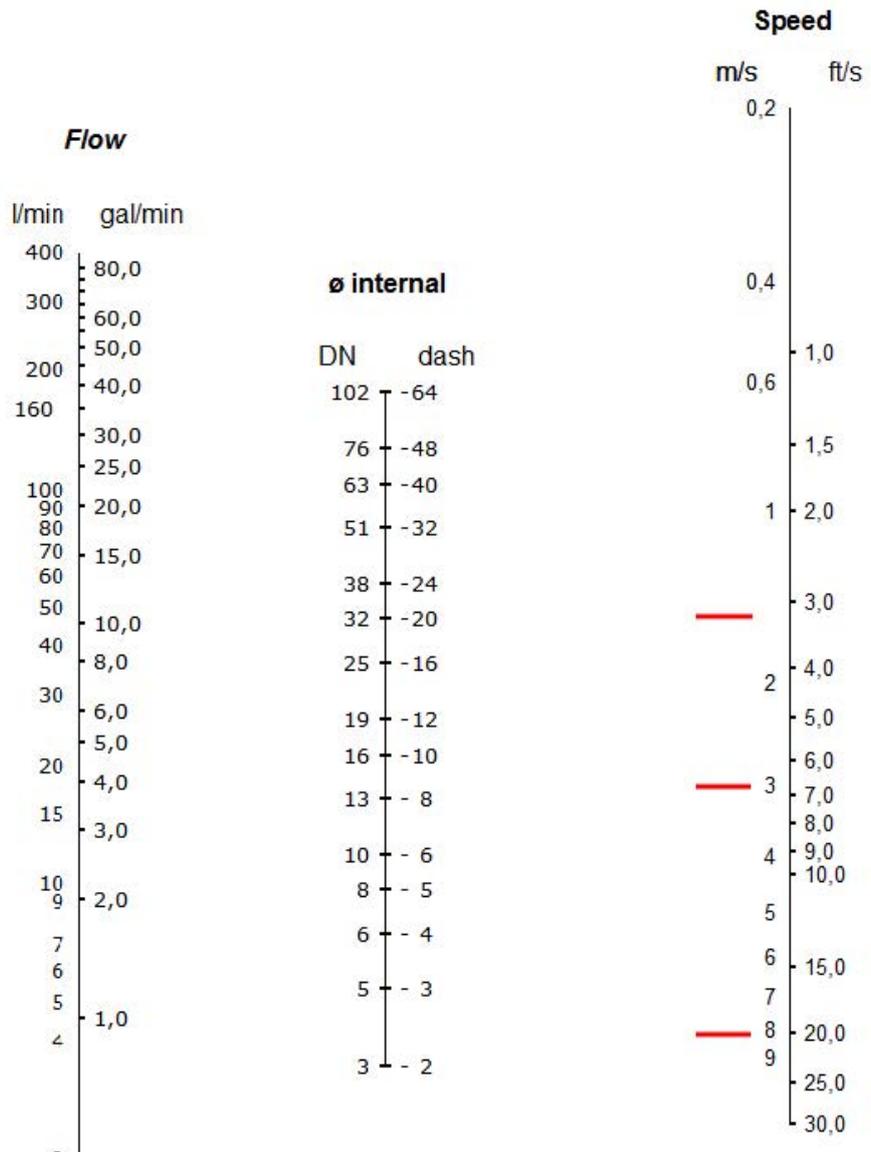

### Recommended line speed:

Pressure lines: 3 - 8 m/s

return line: 1,5 - 3 m/s

Suction lines 0,5 - 1,5 m/s

Pilot lines: max 5 m/s

## CALCULATED TUBE WORKING/BURST PRESSURE

## ASSEMBLY INSTRUCTIONS

### ISO 8434-1/DIN2353 – Assembly Instructions

#### 1.Preparation of tube

- Cut tube off at a right angle. A maximum angular deviation of  $0,5^\circ$  relative to the tube axis is permissible.

#### NOTE

Do not use pipe cutters or cutting off wheels as they cause severe burring and angular cuts. Use of a precision cut-off machine or device is recommended.

- Lightly deburr tube ends inside and out (maximum  $0.2 \times 45^\circ$ ) and clean them.

#### NOTE

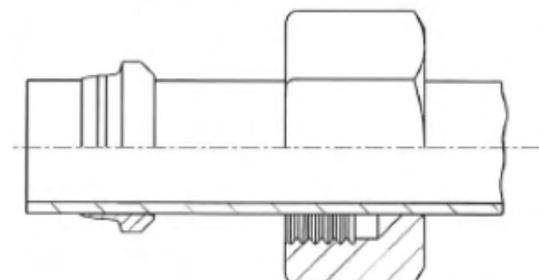

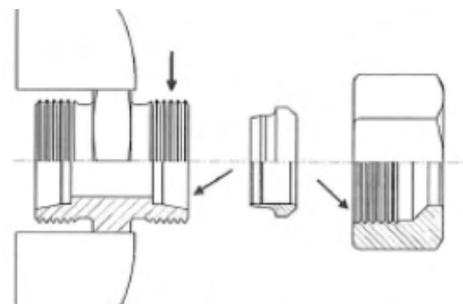

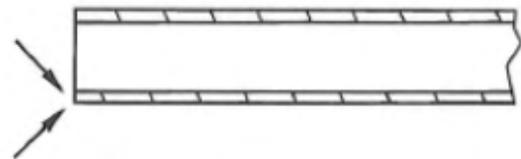

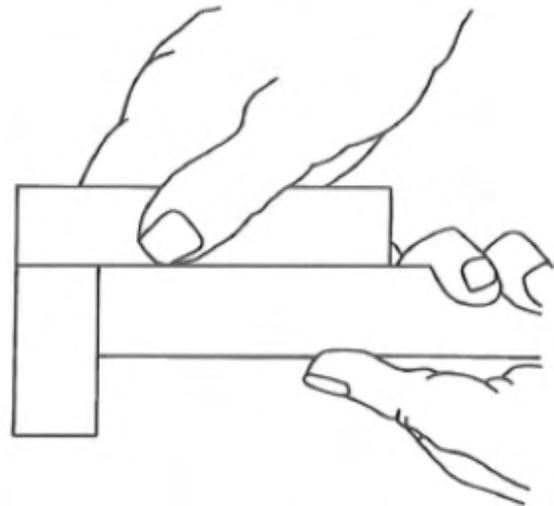

Thin-walled tubes may require supportive inserts. Any deformation or irregularity such as inclined sawed-off tubes or excessively deburred tubes reduce the integrity, life expectancy and the sealing of the connection.

#### 2.Lubrication and orientation

- Lubricate thread and  $24^\circ$  cone of the body and the thread of the nut

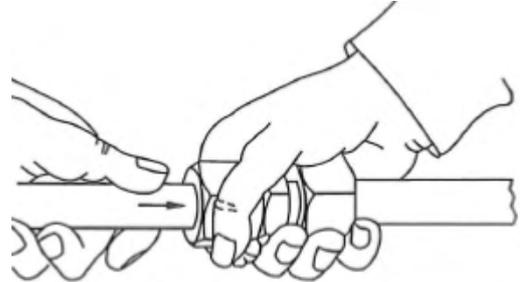

- Place nut and cutting ring on the tube with the cutting edge towards the tube end.

**NOTA:** Ensure that the cutting ring is facing the correct direction to prevent assembly error.

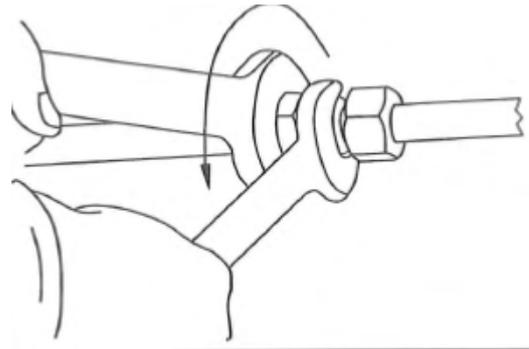

### 3. Initial Assembly

- Assemble the but by hand until contact of the body, cutting ring and nut becomes noticeable
- Insert the tube into the connector body so the tube bottoms out on the tube stop. The tube shall touch the tube stop to ensure that the cutting ring bites into the tube correctly.

### 4. Tightening Pre-Assembly:

- After inserting the tube inside the connector body Tighten the nut with a wrench by hand until the cutting ring stays stopped.
- Tighten the nut with a wrench until cutting ring contact with tube. In this configuration the cutting ring avoid tube rotation.
- Tighten the nut up to 1 turn maximum by holding the tube against rotation

For a more reliable connection use the HF3-DIN machine

### 5. Check

- Disassemble the tube connection.
- Check penetration of cutting edge. If the connector was assembled correctly a ring of materials distributed equally will be visible and should completely cover the front cutting edge.

#### NOTE

The cutting ring may turn on tube freely but should not be capable of axial displacement

### 6. Final Assembly

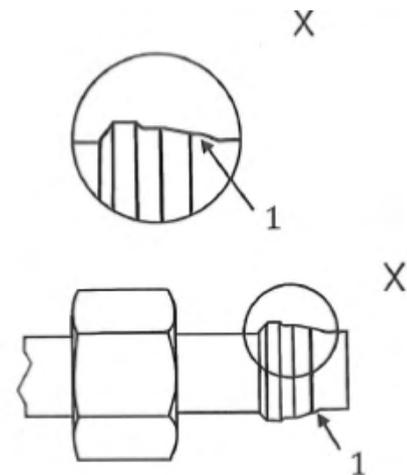

- In the final assembly the nut shall be re-tightened firmly using the same torque as required for initial assembly.
- Hold the connector body firmly with one wrench and turn the nut with another wrench.
- Tighten the nut until resistance to torque is noticeable.
- For all pre-assembly the nut shall be tightened with a  $\frac{1}{4}$  further turn once a minimum resistance to torque is noticeable (up to a maximum of  $\frac{1}{2}$  turn)
- 

### 8. Minimum length of straight tube end for tube bends

- The length of undeformed straight tube ( $2 \times h$ ) shall be at least twice the length of the nut ( $h$ ).

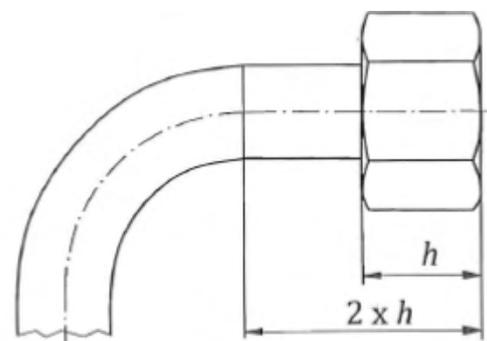

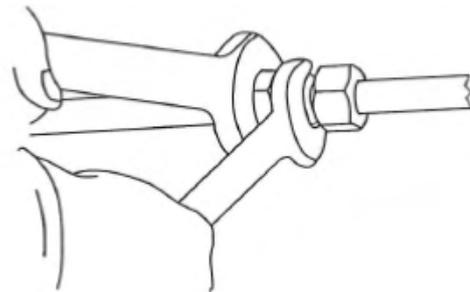

#### NOTE

The straight tube end may not exceed any deviation of roundness or straightness which exceeds the dimensional tolerances of the tube.

Key

1 ring of material

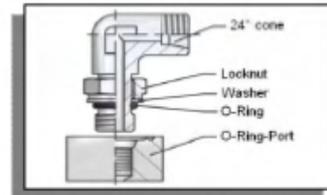

## ADJUSTABLE FITTINGS WITHOUT REAITINING RING

### Assembly Instructions

ISO 6149, ISO 11926

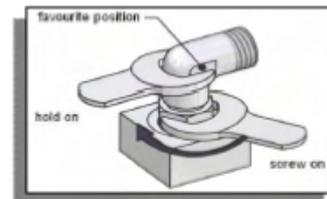

#### 1. Assembly

- Pre-assembly with locknut, washer and o-ring.
- Lubricate the o-ring.
- Tighten the locknut until the thread groove has been discovered.
- Tighten the fittings into the port;
- Check contact between washer and port surface.

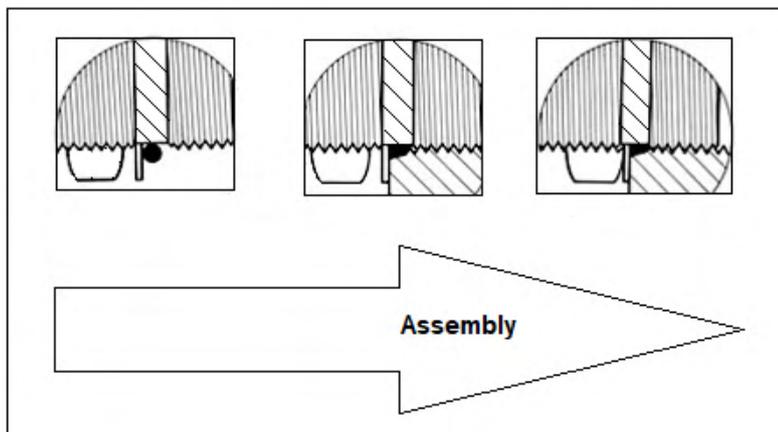

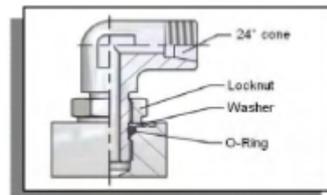

#### 2. Adjustment

- Loosen the fittings up to 1 turn maximum until the right position has been reached.

#### 4. Final Assembly

- Hold the fitting with a wrench and with a second wrench tighten the locknut.

## DKO FITTINGS

### Assembly Instructions

ISO 8434-1

#### 1. Assembly

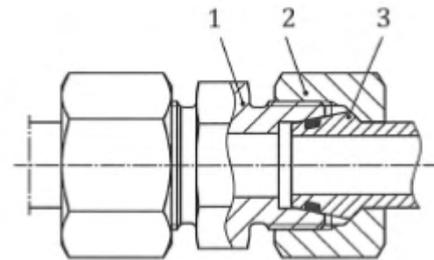

- Check the O-ring for any sign of damage and for the correct position in the groove.
- Lubricate lightly the O-Ring, the cone and the thread.
- Keep the taper aligned and insert it into the cone by pressing it firmly.
- Tighten manually the union nut.
- Turn the nut about  $\frac{1}{4}$  -  $\frac{1}{3}$  of turn to complete the installation.

#### **NOTE**

- Assembly and disassembly shall be performed by turning the union nut and not the counter connection fitting.

#### Key

- 1 body
- 2 nut
- 3 DKO-end (including O-ring)

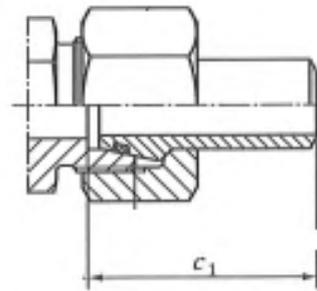

## WELD ON NIPPLE Assembly Instructions

ISO 8434-1

### 1. General notes

- Reference standard ISO 8434-1.
- The final user is responsible for welding procedure.
- Reference tube length are shown below:

Series	OD Tube [mm]	C1 [mm] [+/-1 mm]
L	6	32
	8	32
	10	33,5
	12	33,5
	15	35
	18	37
	22	39,5
	28	42,5
	35	49,5
	42	50
S	6	32
	8	32
	10	33,5
	12	33,5
	14	37
	16	40,5
	20	47
	25	53,5
	30	57,5
	38	64,5

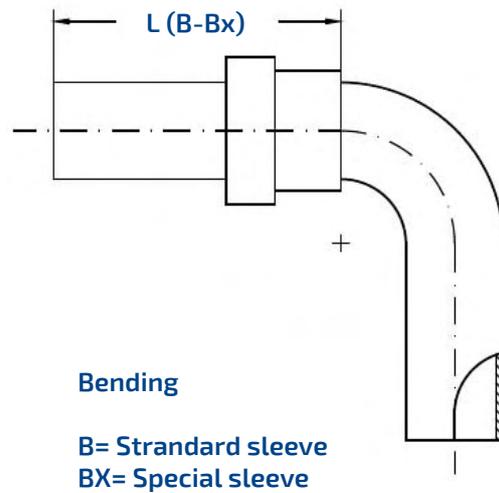

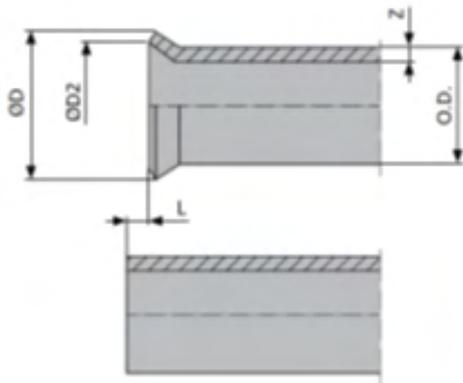

### 2. Assembly

- Check the O-ring for any sign of damage and for the correct position in the groove.
- Lubricate lightly the O-Ring, the cone and the thread.
- Keep the taper aligned and insert it into the cone by pressing it firmly.
- Tighten manually the union nut.
- Turn the nut about  $\frac{1}{4}$  to complete the installation.

#### **NOTE**

- Assembly and disassembly shall be performed by turning the union nut and not the counter connection fitting.

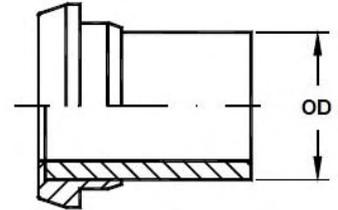

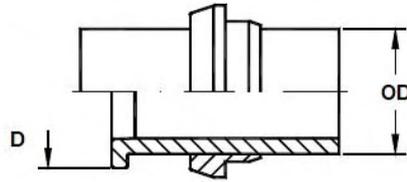

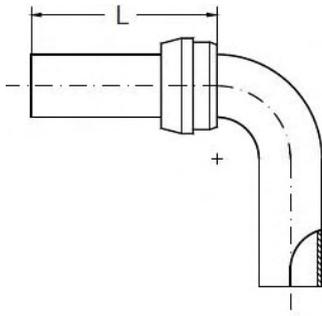

### PIPE DIMENSIONS FOR JIC FITTINGS

35	1 1/4'	39,5	40,5	
38	1 1/2'	47,5	48,5	

## ASSEMBLY DESIGN AND INSTALLATION

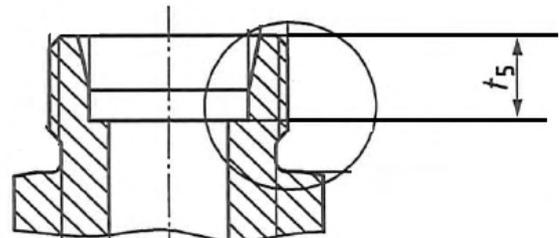

The following factors shall be considered when dimensioning a piping system and calculating tube length for an assembly length:

- Minimum length of straight and elbow parts;
- Additional dimensions related to couplings;
- Additional tube sections (flaring, bend radii, elbows, straight parts).

As guideline in piping system design it is recommended to consider an extra length for tubes ends in order to be able to adjust the assemblies before pre-assembly and final assembly.

As reference ISO 8434-1 dimension inside coupling is reported:

Tube OD	T5 [mm]
L 6	7
L 8	7
L 10	7
L 12	7
L 15	7
L 18	7,5
L 22	7,5
L 28	7,5

S 14	8
S 16	8,5
S 20	10,5
S 25	12
S 30	13,5
S 38	16

## RECOMMENDATIONS

Hydraulic Systems efficiency shall be guaranteed by tubes and fittings correct design and installation.

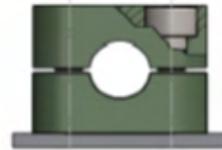

It is necessary to avoid any kind of leakage or failure during operation.

After tubes dimensioning and lines definition here below recommendations to follow during installation and routings:

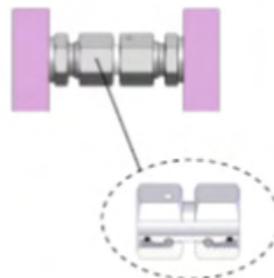

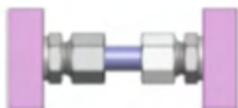

**Joints accessibility:** it is suggested to keep tubes away from components requiring periodical inspection and to have an easy access to connection points where inspections are required.

**Routing:** It is recommended to have a routing providing an easy trouble shooting for maintenance and repair actions. Right angled, parallel and clear lines are the recommended configuration.

**Fixing:** Do not use tubes to support external loads. Tube shall be fixed properly with proper tube clamps.

**Length:** it is recommended to avoid short tubes that can be affected by fatigue failures. If possible, swivel connectors are the preferable solutions.

Installation: excessive stresses on joints have to be avoided.

## Clamps – Installation instructions

### WELDING PLATE MOUNTING

- Adjust weld plates and position with locating magnets or clips.
- Weld the plate on.
- Press the lower half-clamps.
- Lay the tube, put on second the upper half-clamp and tighten screws.

Don't weld the plate with the plastic-clamps

Long weld plates can be screwed directly to the surface. It is advised against contact between brackets.

### RAIL MOUNTING

Mounting rails are supplied in 2 m length. Rails can be installed on the related support by welding or screws.

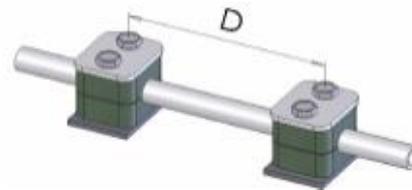

In case of screw install the nut in the rail and turn it until it stops.

Insert the lower half-clamp, put the hose in the final position, insert the upper half-clamp and tighten the screws.

It is important to pay attention to tubes interaxle spacing. It is advised against contact between brackets.

Ø esterno tubo - Ø tube (mm)	D (mt)

Distanza suggerita tra collari dello stesso tipo

Si consiglia di posizionare le staffe prima e dopo una curva a 90.

## ELASTOMERIC SEAL

O-Ring normally provided is made in NBR 90 Shore A hardness.

NBR O-Ring is suitable for a temperature range within -35 °C to +100 °C / -31 °F to +212 °F.

In case of aggressive environment FKM (Viton® - temperature range within 25 °C to +200 °C / -13 °F to +392 °F) or EPDM O-Ring is available.

About storage it is recommended to follow ISO 2230/ DIN 7716 "Rubber products — Guidelines for storage".

- Store seals in a dry place, at temperatures not exceeding +25 °C / +77 °F.
- Protect seals from sunlight, ozone, strong artificial lightning and heat sources during storage.

### THE PRINCIPLES OF CORRECT STORAGE

The O-Rings must be stored in such a way as to avoid external damage that can occur in the form of damage to the surface such as deformation due to traction, pressure or bending or from packaging components (e.g. staples).

The O-Rings must also be stored in a cool and dry environment, preferably at temperatures between 15 °C and 25 °C with humidity below 65%.

The O-rings must not be exposed for too long to sunlights and artificial light with a high UV content and must be kept away from ozone sources.

The storage rooms must not contain ozone which can be produced by devices such as electric motors, high voltage devices and must also not contain combustion and organic gases.

Point of contacts between rubber products of different components must be avoided. As well as contact between chemicals or hazardous materials (eg copper, manganese) are to be avoided.

The best solution is to keep the O-Rings in airtight packaging, especially plastic bags protected from UV rays.

The O-Rings retain their properties only if stored correctly.

If the above recommendations are respected, the gasket can be stored without losing their characteristics for a period of 5 years for NBR and 10 years for FKM.

Unsaturated elastomers such as Nitrile Rubber (NBR) can have a much shorter age under improper storage conditions than for example saturated elastomers, Fluoroelastomers (FKM).

To ensure their sealing function, storage, cleaning and maintenance must comply with the directives of DIN 7716.

The result is a longer functional life and avoid premature aging, hardening or embrittlement.

## FLUID COMPATIBILITY TABLE

Legend		Materials Guide		
excellent	↑	NBR	Nitrile rubber

The table of compatible fluids cited above refers to literature data; for more information contact our technical department. For adapters and pressure fittings that have O-Rings in contact with the fluid, it is necessary to take into consideration the chemical compatibility with the passing fluid that will be used.

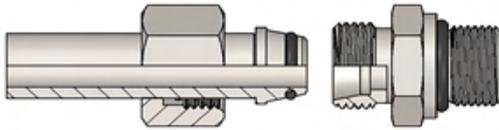

### REPLACEMENT OF THE O-RING

To replace the O-Ring the following steps must be acquainted.

- Check the elastomers before assembly and verify that a) they are not damaged on the surface b) deformed c) they are not hardened d) that they have not lost their elasticity.
- Use assembly greases or oils (compatible with elastomers)
- Avoid twisting the O-Ring by winding
- There must be no acute / cutting passages, machining grooves, threads or holes
- The presence of dirt or residues in the O-Ring installation site is not allowed
